DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Michael E. Monaco Reg. No. 52,041 on February 20, 2007.

The application has been amended as follows:

- 1) In the specification page 6 lines 2-3, "optical rotator 14" has been changed to:
--optical rotator 13--

Drawings

The drawings are objected to because the drawings do not include descriptive labels that help in understanding the figures. For example, Box 5 should include the label "Nonreciprocal optical rotator". Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must

be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Allowable Subject Matter

Claims 1-14 are allowed.

The following is an examiner's statement of reasons for allowance: With respect to claim 1, the prior art failed to teach or render obvious the claimed slaving device including a first nonreciprocal optical rotator and either a reciprocal optical rotator or a birefringent element; a second assembly including a first spatial filter and a first polarization separation element; a third assembly including a second spatial filter and a second polarization separation element, the second and third assemblies being located at either side of the first optical assembly, each symmetrical to the other; a fourth optical assembly made up successively of a first quarter waveplate, a second nonreciprocal optical rotator and a second quarter waveplate whose main axes are perpendicular to those of the first quarter waveplate; such that a first and second linearly polarized propagation modes perpendicular to one another, can propagate in a first direction in

the cavity, and third and forth propagation modes polarized linearly parallel to the first and second modes can propagate in the opposite direction in the cavity, the axes of the first and second quarter waveplates tilted 45 degree relative to the directions of the four propagation modes, and the optical frequencies of the four modes all being different. The prior art teaches various gyrolasers including the multiple modes propagating in different directions and frequencies. However, none of the prior art either singularly or in combination teaches the claimed system.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
